How do I fix a faulty base station?

To fix this issue, you can follow these steps: 1. Check the power supply and make sure that the base station is properly plugged in. 2. Verify the Wi-Fi connection and ensure that the base station is within range. 3. If the problem continues, try restarting the base station or performing a factory reset.

What should I do if my base station is not working?

Make sure the Base Station isn't plugged into an outlet with a switch. If needed, try a different power outlet. If using a surge protector or power strip, try connecting directly to the wall. If the internet LED is blue or green, your internet connection is restored.

How do I fix a broken base station power adapter?

Unplug both ends of the power adapter. Inspect the entire length of the cord to make sure it isn't damaged, frayed, or torn. Plug the power adapter back in and reinsert it into your Base Station. Make sure that the adapter is securely connected to the back of your Base Station and plugged into an outlet.

Why are there no LEDs on my base station?

If no LEDs on your Base Station are lit, contact Arlo Support 4. Test your Ethernet cable on another device. Try to connect to the internet from another device (like a laptop computer) that is connected directly to your router with the Ethernet cable. Make sure you can browse the internet from this device.
