Our portable battery enclosures are designed to contain explosive and ballistic failure while allowing the venting of combustion gasses. Their clear blast-rated panels allow for observing ...

Southwest Research Institute offers research and testing of fluids, materials, cells, packs and other battery immersion cooling technology used in ...

With this in mind, immersion test procedures should balance an assessment of safety during and post-immersion with the duration of immersion playing a key role in determining the state of ...

Southwest Research Institute offers research and testing of fluids, materials, cells, packs and other battery immersion cooling technology used in electric vehicles and energy storage systems.

Based off the research completed to date, a battery immersion test in water of lower salinity ($0.1\% \text{ NaCl}$) and shorter immersion duration (30 min) would be more stringent than a test ...

New lithium-ion battery cabinet completes UL 9540A test Lithium-ion batteries have risen quickly in popularity for Uninterruptible Power Supply (UPS) applications because of their smaller size ...

The immersion test of batteries is done to check the battery's resistance to liquid short circuits, corrosion, and oxidation. Immersion tests ensure that the battery fulfills the usage requirements.

EXOES is currently prototyping and testing immersion cooled LFP modules to demonstrate the advantages of immersion.

One of the more specialized tests for battery systems is the immersion test. Our facility not only supports a basic immersion test, but with our specialized test setup, we are able to simulate ...

Therefore, this review paper presents the current state-of-the-art in BTMSs with a focus on the applicability, progress and challenges of using immersion cooling for LIBs.

In this video, we conduct a real water immersion test on a lithium battery pack. No simulations. No special effects.
