-----

Similar to its predecessor, 6G will be organized into geographical sectors known as cells, with multiple levels of base stations such as pico-net, femto-net, and macro-net ...

Intelligent surface (IS) is envisioned as a promising technology for the sixth-generation (6G) wireless networks, which can effectively reconfigure the wireless propagation environment via ...

A new generation of intelligent aerospace platforms--drones, airships, and satellites--will be part of tomorrow's 6G networks, acting as, ...

Although base stations for 6G aren't around yet, 4G LTE and 5G networks use cell towers and "small cells"--small transmitters ...

Research into terahertz radiation (300-3,000 GHz) and millimeter-wave frequencies (30-300 GHz) explores their potential for 6G mobile networks. These high frequencies can support ...

A new generation of intelligent aerospace platforms--drones, airships, and satellites--will be part of tomorrow's 6G networks, acting as, in effect, base stations in the sky. ...

In this section, we go into the technical details of how AI could automate 6G communications and network operations, autonomously ...

Here, we propose a large-scale 2-bit millimeter-wave programmable metasurface to build an integrated smart base station framework for 6G communications. The meta-array is composed ...

operations, autonomously manage resources, and enable self ...

Thanks to mobility and large coverage, 6G mobile networks introduce satellites and unmanned aerial vehicles as aerial base stations (ABS) in the 6G era. Instead of using a wired ...

Although base stations for 6G aren't around yet, 4G LTE and 5G networks use cell towers and "small cells"--small transmitters installed on street corners and utility poles--to ...

Here, we propose a large-scale 2-bit millimeter-wave programmable metasurface to build an integrated smart base station framework for 6G ...

Research into terahertz radiation (300-3,000 GHz) and millimeter-wave frequencies (30-300 GHz) explores their potential for 6G mobile ...

Turning on database stations on demand can effectively reduce the number of concurrent service base stations, lowering network costs and energy consumption while ...

Tomorrow's 6G networks will likely utilize a layered architecture, incorporating various aerial platforms to act as bright base stations. Here's a breakdown of what that could ...
