---

DMC developed a cost-effective, fully automated, and portable testing system designed specifically for monitoring large battery packs through environmental, cycling, and endurance ...

The client's product was designed to safely store hundreds of kilowatt-hours of energy in an internal battery system and provide that power to users in a variety of AC-power formats ...

NYC Department of City Planning (DCP) proposed updates to existing zoning regulations for energy storage systems as part of the City of Yes for Carbon Neutrality initiative.

This BMS test system was built using DMC's modular Battery Test Platform, incorporating proven software and hardware architectures, along with flexible and reliable subsystem components ...

DMC 8.0 Door-mounted chiller 8 kW for Battery Energy Storage Systems Inverter driven compressor for energy efficiency Integrated heater for optimal battery operation at low ambient ...

The surge in global lithium-ion battery production, primarily for electric vehicles (EVs) and energy storage systems, directly correlates with rising demand for dimethyl ...

Energy storage systems, like large-scale batteries, are charged by electricity drawn from the power grid during periods of low demand or extra capacity, provided they are not directly ...

The facility will serve as a large-scale battery energy storage system capable of charging from, and discharging into, the New York power grid. When fully functional, the ...

Energy storage is essential to a resilient grid and clean energy system. Learn about the types of energy storage, available incentives, and more.

DMC's BMS Test Systems support the development of laptop and consumer electronic batteries, high power lithium ion batteries for electric vehicles, and power modules for a humanoid ...
