What is a bus tie breaker?

A Bus Tie Breaker is an essential device used in electrical systems to connect or isolate individual sections of a switchboard. In maritime and offshore operations, particularly in vessels equipped with Dynamic Positioning (DP) systems, bus tie breakers play a critical role in ensuring power distribution reliability and flexibility.

What is a tie breaker?

A tie breaker is a type of circuit breaker that connects two sections of an electrical bus serving different power sources. They are commonly used to connect electrical systems to power sources and load circuits, as well as to protect people and equipment from overcurrents. In the context of maintenance, tie breakers offer significant advantages.

How many bus tie breaker controllers can a Deif power management system include?

A DEIF power management system can include as many Bus tie breaker controllers as necessary. Part of the versatile PPM 300 range The PPM 300 Bus tie breaker controller is part of the DEIF PPM 300 range of versatile controllers with built-in multi-master power management features.

Why should a tie breaker be separated when not in use?

Keeping the two sections separated when not in use is important for several reasons. Firstly, it allows for redundancy in the system. If one power source fails, the tie breaker can be closed to bring in the second power source to supply the entire load. This ensures that there is no disruption to the critical load.
