This article aims to explore an optimal configuration and conduct a technical and economic analysis of a hybrid solar-wind energy system tailored for electrifying Laayoune city.

GE Vernova's expertise with wind turbines, solar and energy storage solutions, grid systems, and power conversion technologies will be key elements to enable the greenhydrogen value chain, ...

In the present work, helium serves as the primary working fluid within the supercritical Brayton cycle, employed to generate power through a solar power tower system.

The major objectives of this work are: 1) to develop new efficient optimization algorithm to solve NP-hard problems, 2) to show the potential of integrating renewable energy technologies for ...

PVGIS is one of many simulation tools developed to help engineers and design researchers to evaluate the performance and realize solar PV systems around the world.

Based on these findings, it is recommended to consider the integration of both solar and wind systems in Dakhla and Laayoune, taking advantage of their high potential for both energy ...

Laayoune, Morocco, located in the Northern Sub Tropics, is a pretty good location for generating solar energy throughout the year. The amount of electricity you can expect to get from every ...

In contrast to the low-temperature solar devices, high-temperature solar systems achieve temperatures beyond 250 °C and can go up to 3000 °C or more by using concentrating ...

Dive into the research topics of "Optimal design and techno-economic analysis of a hybrid solar-wind power
