-----  
Does CableFree offer a 5Ghz base station?

CableFree offers Band 46 5GHz LTE Base Station and Outdoor CPE devices for operation in Unlicensed 5GHz spectrum, enabling smaller operators and private customers to build LTE without requiring access to licensed spectrum. Band 46 covers 5150 - 5925MHz and uses TDD-LTE technology. Contact CableFree for details.

How is a message broadcasted?

Broadcast to Cells: The message is then broadcast from the cell tower or network base station to all mobile devices within its coverage area. This message is broadcast to the Cell Broadcast Center (CBC), which manages the delivery to all devices in the region.

What is the difference between message creation & broadcasting?

Message Creation: An authorized entity (such as a government body, emergency service, or telecom operator) creates a message containing critical information. Broadcast to Cells: The message is then broadcast from the cell tower or network base station to all mobile devices within its coverage area.

How does SMs work?

It reaches everyone within a cell tower's range, regardless of mobile carrier or network. SMS: Traditional SMS messages are typically sent to individual phone numbers. While SMS can be used to send emergency alerts, it is not a mass notification system. It also requires the recipient's phone to be on and reachable via the specific cellular network.
