What is the main source of electricity in Riga?

It is the primary source of electricity in Riga, while Riga reservoir is a source of tap water for the majority of Riga residents. In addition, the power plant is used as a compensation plant for TEC2 thermal power plant to regulate voltage in electrical networks and to compensate the power deficiencies.

Where is Riga hydro power project located?

Riga is a 402MW hydro power project. It is located on Daugava river/basin in Riga, Latvia. According to GlobalData, who tracks and profiles over 170,000 power plants worldwide, the project is currently active. It has been developed in a single phase. Post completion of construction, the project got commissioned in 1974. Buy the profile here.

When was the Riga hydroelectric power plant built?

The Riga Hydroelectric Power Plant was put into operation in 1974. In order to build Riga HES, a dam was constructed across the Daugava River through the middle of Doles Sala, half of which has since been flooded to make room for Riga Reservoir.

The project is mainly invested by State Grid Integrated Energy and CATL, which is the largest single grid-side standalone station-type electrochemical energy storage power station in China ...

This infrastructure is of TYPE Hydro Power Plant with a design capacity of 402 MWe. It has 6 unit (s). The first unit was commissioned in 1974 and the last in 1974. It is ...

As of 2025, Latvia's energy storage capacity has grown 300% since 2020, with Riga leading this charge [8]. This isn't just about keeping smartphones charged; it's about rewriting Europe's ...

It is located on Daugava river/basin in Riga, Latvia. According to GlobalData, who tracks and profiles over 170,000 power plants worldwide, the project is currently active.

Amsterdam, January 12, 2024 - GIGA Storage is pleased to announce the development of the Green Turtle project, a groundbreaking energy storage project with 600 MW of power and ...

Rigas HES is an important part of Riga's development. It is the primary source of electricity in Riga, while Riga reservoir is a source of tap water for the majority of Riga residents.

As we approach Q4 2025, Riga's storage capacity is projected to triple, potentially eliminating the need for one natural gas peaker plant entirely. Now that's what we call powering progress!

There are currently a total of 23 operational biogas power stations and seven biomass power stations in Latvia. Most of them are cogeneration stations.

Riga-1 power station is an operating power station of at least 158-megawatts (MW) in Riga, Latvia. It is also known as RTEC1, Riga CHPP-1 power station.
