---

These ICs are engineered to provide robust solutions for managing lithium-ion batteries in various applications. They offer features such as overvoltage detection, open-wire ...

Learn about the essential semiconductor components required for battery-powered tools, including MOSFETs, gate drivers, ...

Our battery management solutions, tools and expertise make it easier for you to design more efficient, longer lasting and more reliable battery-powered applications.

Compare specifications across various parameters to find the right part for your design. Our battery charging ICs support 2, 3, and 4 battery devices, ...

Nexperia battery booster IC"s are ideally suited for low power applications such as Zigbee, LoRa, Sigfox, LTE-M1, and NB-IoT transceivers that are powered by CR2032 and CR2025 lithium ...

Explore our battery management IC products and wide range of applications. Analog Devices offers a broad portfolio of battery charger IC devices for ...

They also ensure that applications using them comply with UL, IEC and other safety standards. ABLIC supplies a comprehensive range of ICs, from ...

To select the right battery management integrated circuit (IC) based on your specific application needs, consider parameters such as battery chemistry, cell configuration, ...

These devices offer outstanding measurement accuracy (voltage, current, and temperature) and extremely low power consumption in small ...

Nexperia battery booster IC's are ideally suited for low power applications such as Zigbee, LoRa, Sigfox, LTE-M1, and NB-IoT transceivers that are ...

Explore our battery management IC products and wide range of applications. Analog Devices offers a broad portfolio of battery charger IC devices for any rechargeable battery chemistry, ...

Learn about the essential semiconductor components required for battery-powered tools, including MOSFETs, gate drivers, motor drivers and more. Start from the main ...

They also ensure that applications using them comply with UL, IEC and other safety standards. ABLIC supplies a comprehensive range of ICs, from motor control through to battery ...

Compare specifications across various parameters to find the right part for your design. Our battery charging ICs support 2, 3, and 4 battery devices, and have functions such as hybrid ...

Additional products include li-ion battery monitoring ICs optimized for larger standalone battery packs such as those used with power tools.

These devices offer outstanding measurement accuracy (voltage, current, and temperature) and extremely low power consumption in small footprints. They increase battery runtime and ...
