What is the South Tarawa water supply project?

The Green Climate Fund, in partnership with the government of Kiribati, the Asian Development Fund, the World Bank and the Global Environment Facility, is enabling the implementation of the South Tarawa Water Supply Project, involving the construction of two desalination plants and a solar PV system to augment Kiribati's water supplies.

How will South Tarawa reduce emissions?

This will be done through the construction of a 4,000 m³ desalination plant and a photovoltaic system to provide low-emission power for the plant and the water supply network. With this project, the residents of South Tarawa will no longer need to boil drinking water, reducing emissions from burning fuel and firewood.

How will South Tarawa reduce climate vulnerability?

With this project, the residents of South Tarawa will no longer need to boil drinking water, reducing emissions from burning fuel and firewood. This project aims to reduce the climate vulnerability of the entire population of South Tarawa through increased water security by providing them with a reliable, safe, and climate-resilient water supply.

How many desalination plants are there in South Tarawa?

Construction of the project's 2 desalination plants, at Betio and McKenzie, is complete. Commissioning of the McKenzie plant is ongoing, and the plant is expected to commence delivering water to the residents of South Tarawa before the end of Q4 2024.

With the commissioning of desalination plants, partial improvement of water supplies is likely in South Tarawa. The water supply network contract will be rebid and will likely be awarded by ...

This report outlines key pathways to strengthen water resilience, through private sector and multi-stakeholder action, and secure the future of water for society and the global ...

The ongoing project will address the factors causing the high incidence of waterborne diseases in South Tarawa by delivering and managing new and rehabilitated climate-resilient water supply ...

The project reflects the complexity of the water problem in South Tarawa and uses a mix of approaches to provide additional water, reduce water leakage, institutional strengthening and ...

The South Tarawa Water Supply Project funded by Asian Development Bank, Green Climate Fund, World Bank and the ...

The project will achieve this through major water infrastructure upgrades, including a desalination plant, water supply network improvement and ...

The South Tarawa Water Supply Project funded by Asian Development Bank, Green Climate Fund, World Bank and the Government of Kiribati is a US\$58 million project ...

Water scarcity, pollution and extreme weather events driven by climate change, population growth and industrial demand are pushing global water systems to critical levels. ...

This will be done through the construction of a 4,000 m³ desalination plant and a photovoltaic system to provide low-emission power for the plant and the water supply network. ...

Emerging economies incur a disproportionate impact on food-water systems yet are proving innovation can turn constraints into catalysts to meet demands.

Protecting the global water cycle can help us achieve many of the SDGs. Here's how public-partnerships can unlock innovative solutions for a sustainable future.

Commissioning of the McKenzie plant is ongoing, and the plant is expected to commence delivering water to the residents of South Tarawa before the end of Q4 2024.

The project aims to reduce the climate vulnerability of the entire population of South Tarawa through increased water security by providing them with a reliable, safe, and climate ...

The project will achieve this through major water infrastructure upgrades, including a desalination plant, water supply network improvement and installation of a solar photovoltaic system.
