How many planets are in the Solar System?

There are eight planets in the solar system. The four inner terrestrial planets are Mercury, Venus, Earth, and Mars, all of which consist mainly of rock. The four outer planets are Jupiter, Saturn, Neptune, and Uranus, giant planets that consist mainly of either gases or ice.

What is a small body in the Solar System?

Any natural solar system object other than the Sun, a planet, a dwarf planet, or a moon is called a small body; these include asteroids, meteoroids, and comets. Most of the more than one million asteroids, or minor planets, orbit between Mars and Jupiter in a nearly flat ring called the asteroid belt.

Is the Solar System observable?

The solar system is part of the "observable universe," the region of space that humans can actually or theoretically observe with the aid of technology. Unlike the observable universe, the universe is possibly infinite.

Is the Solar System a planetary system?

The International Astronomical Union describes the Solar System as all objects that are bound by the gravity of the Sun, the Sun itself, its eight planets, and the other celestial bodies which orbit it. NASA describes the Solar System as a planetary system, including the Sun and all objects that orbit it.

The Ecliptic Plane Input Catalog (or EPIC) is a publicly searchable database of stars and planets that is associated with the K2 "Second Light" plan of the Kepler space telescope mission. Examples of related stars include: EPIC 201563164, EPIC 204278916, EPIC 204376071 and EPIC 249706694. Examples of related planets include: EPIC 203771098 b, EPIC 203771098 c, EPIC 206011691 c and

It is affected by the gravitational pull of the Moon, Sun, and planets. This accelerates and decelerates the Earth's rotation slightly over time. In the early 1900s, scientists found that the ...

When not used as a proper noun and written without capitalization, "solar system" may refer to either the Solar System itself or any system reminiscent of the Solar System.

Revolving around the sun are eight planets. The planets are divided into two categories based on their composition, terrestrial and Jovian. Terrestrial planets, including ...

Kepler-265 e has been discovered by the Kepler spacecraft and was originally classified as a planet candidate. A new statistical analysis led by a team at NASA Ames Research Center ...

The Sun is the star at the center of our Solar System. It is the largest object and contains 99.86 percent of the total mass of the Solar System. Its ...

Solar system 265epic represents a classification term potentially referring to a specific solar system identified by astronomers or researchers. Within the broader scientific ...

Our solar system is located in the Milky Way, a barred spiral galaxy with two major arms, and two minor arms. Our Sun is in a small, partial arm of the Milky Way called the Orion ...

When not used as a proper noun and written without capitalization, "solar system" may refer to either the Solar System itself or any system ...

The Sun is the star at the center of our Solar System. It is the largest object and contains 99.86 percent of the total mass of the Solar System. Its gravity holds the Solar System together, ...

Solar system 265epic represents a classification term potentially referring to a specific solar system identified by astronomers or ...

The solar system is part of the "observable universe," the region of space that humans can actually or theoretically observe with the aid of technology. Unlike the observable ...

Revolving around the sun are eight planets. The planets are divided into two categories based on their composition, terrestrial and ...

Our solar system is located in the Milky Way, a barred spiral galaxy with two major arms, and two minor arms. ...

"Eyes on Exoplanets" will fly you to any planet you wish--as long as it's far beyond our solar system. This fully rendered 3D universe is scientifically accurate, allowing you to ...
