What is a 5G base station?

They help fill coverage gaps, improve network reliability, and handle high data traffic. In cities, more than 60% of 5G base stations are small cells, placed on rooftops, lampposts, and building facades. These mini base stations are crucial for delivering consistent 5G speeds in crowded areas like stadiums, shopping malls, and business districts.

Which countries have the best 5G coverage?

The really big standout is India which seems to have blanketed the country in 5G coverage within just the last 2 years. This contrasts strongly with its neighbours like Pakistan, Myanmar and even large parts (of mostly sparsely populated) China. Europe also has good coverage up until you reach Ukraine and Belarus and into Russia.

How many 5G base stations are there in Japan?

Japan had over 100,000 active 5G base stations by 2023. Japan's 5G network is expanding rapidly, with over 100,000 active base stations by 2023. The country has taken a strategic approach, focusing on major urban centers first and gradually expanding to rural areas.

How many 5G base stations does China have?

China has deployed over 2.4 million 5G base stations as of 2023, accounting for over 60% of the global total. China is leading the 5G revolution. With over 2.4 million base stations, the country accounts for more than 60% of all 5G infrastructure globally.
