Efficient voltage regulator with 18-36VDC input, delivering stable 24V output at 70W. Ideal for reliable power management in diverse applications.

These tools simplify the task of selecting the right power management solutions for these devices and, thereby, provide an optimal power solution for 5G base stations components.

The TPVRHP-2456 is a 70W voltage converter/regulator which accepts an input of plus or minus 18VDC to 36VDC and provides a regulated output of 56VDC @ 1.25A 70W.

The SECO-NCP51530HB-GEVB helps users to simplify and accelerate the design phase in high voltage gate driver applications with the NCP51530, two different MOSFET ...

In particular, MORNSUN can provide specific power supply solutions for optical communication and 5G base stations applications. In particular, MORNSUN's VCB/VCF series of isolated 3 ...

Qorvo products are designed for multimode base stations. Whether you're needing high efficiency, low noise or high linearity, Qorvo's portfolio offers market-leading performance ...

Qorvo products are designed for multimode base stations. Whether you're needing high efficiency, low noise or high linearity, ...

Reliable supplier of communication base station voltage stabilizers; optimize performance with 99.9% voltage accuracy and reduce power disruptions.

Efficient voltage regulator with 18-36VDC input, delivering stable 24V ...

sources of danger to wireless network base stations are lightning and power faults. A strike directly to or nearby the tower can produce high voltages and cause huge currents to flow ...

The proliferating frequency bands and modulation schemes of modern cellular networks make it increasingly important that base-station power amplifiers offer the right combination of output ...

The TPVRHP-2456 is a 70W voltage converter/regulator ...

Compared with the traditional compensatory voltage regulator, it has three significant advantages: intelligent control and display, fast voltage regulation, and silent energy saving.
